

Safety Instructions for IEC62133 Approved Batteries

- Do not open, crush or heat above 140°F (60°C) or incinerate the batteries.
- Do not mutilate, disassemble, dispose of in fire, short circuit or reverse polarity.
- Batteries should be dismantled only by trained personnel.
- Seek medical advice immediately if a cell or battery has been ingested.
- After extended periods of storage, it may be necessary to charge and discharge the cells or batteries several times to obtain maximum performance. When storing, store the battery at 50% capacity. Every 4-6 months, cycle (full charge / full discharge) and charge the battery back to 50% before placing it back into storage.
